Printed and Published by Baptist Johnston, Printer to the Queen's Most Excellent Majesty  
1952

TO HIS HONOUR THE LIEUTENANT-GOVERNOR OF THE PROVINCE OF ONTARIO

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Eighty-first Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario during the year 1950.

Respectfully submitted,

G. H. DUNBAR,  
*Registrar-General of Ontario.*

SIR:

I have the honour to submit for your approval the Eighty-first Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1950.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,  
*Deputy Registrar-General.*

TO THE HON. G. H. DUNBAR,  
*Registrar-General of Ontario.*

## INTRODUCTION

This report is divided into two parts. Part I consists of an analytical survey of the Vital Statistics of the province in the form of narrative summaries, summary tables and charts. Its objectives are (1) to indicate (in so far as can be portrayed by vital statistics) the general trend over the past several years, in the general state of the health of the people of Ontario; (2) to assess the vital statistics of 1950 in the light of these general trends; and (3) to bring to light certain specific problems in the field of public health, such as infant and maternal mortality and deaths from specific diseases such as cancer and tuberculosis and those resulting from accidental causes. Part II consists of detailed tables covering vital statistics for the year 1950. In the interests of economy several tables are not printed in this report. These are listed in the Table of Contents and the information is available upon request providing that such requests, in the opinion of the Registrar-General, are sufficiently warranted and urgent in the public interest.

## PART I.—COMPARATIVE AND ANALYTICAL SUMMARY

## Population

For reference purposes the estimated population of the province over a period of about two decades is shown by sex in Table A, while a distribution by sex and age-groups of the estimated population of 1950 is provided in Table B.

TABLE A—POPULATION, CENSUSES 1921, 1931 AND 1941 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX, ONTARIO

Year	Total	Male	Female	Year	Total	Male	Female
1921	2,933,662	1,481,890	1,451,772	1936	3,606,000	1,835,000	1,771,000
1922	2,980,000	1,507,000	1,473,000	1937	3,637,000	1,850,000	1,787,000
1923	3,013,000	1,525,000	1,488,000	1938	3,672,000	1,867,000	1,805,000
1924	3,059,000	1,550,000	1,509,000	1939	3,708,000	1,885,000	1,823,000
1925	3,111,000	1,578,000	1,533,000	1940	3,747,000	1,904,000	1,843,000
1926	3,164,000	1,606,000	1,558,000	1941	3,787,655	1,921,201	1,866,454
1927	3,219,000	1,635,000	1,584,000	1942	3,884,000	1,966,000	1,918,000
1928	3,278,000	1,666,000	1,612,000	1943	3,917,000	1,983,000	1,934,000
1929	3,334,000	1,696,000	1,638,000	1944	3,965,000	2,005,600	1,959,400
1930	3,386,000	1,724,000	1,662,000	1945	4,004,000	2,016,600	1,987,400
1931	3,431,683	1,748,844	1,682,839	1946	4,101,000	2,068,300	2,032,700
1932	3,473,000	1,769,000	1,704,000	1947	4,189,000	2,113,000	2,076,000
1933	3,512,000	1,788,000	1,724,000	1948	4,297,000	2,170,000	2,127,000
1934	3,544,000	1,804,000	1,740,000	1949	4,411,000	2,231,200	2,179,800
1935	3,575,000	1,820,000	1,755,000	1950	4,512,000	2,283,400	2,228,600

The estimated populations for 1932 to 1940 and 1942 have been revised and the necessary adjustments have been made in the tables showing rates.

TABLE B—ESTIMATED POPULATION OF ONTARIO, BY SEX AND AGE-GROUP, 1950

Age-Group	Total	Male	Female	Age-Group	Total	Male	Female

Figures supplied by Social Analysis Branch, Dominion Bureau of Statistics.

\*These estimates do not take into account interprovincial migration, figures for which are not available for intercensal years.

The rural and urban distribution of the 1950 estimated population was as follows:—

Population Group	Assessed Population	Per cent
Incorporated centres *10,000 population and over.....	1,950,979	43.2
Incorporated centres *5,000 to 10,000 population.....	273,927	6.0
Incorporated centres *1,000 to 5,000 population.....	367,707	8.1
Rural Population (including incorporated centres under 1,000*).....	1,919,387	42.5

\*As at Census of 1941.

Births and deaths for the year 1950 are classified by place of residence, marriages being classified by place of occurrence.

Tables 7, 8, 23, 24, 30 and 31 have totals by place of occurrence and place of residence.

### Natural Increase

The natural increase in the population and the computed rates for the period 1922 to 1950 are shown in Table C.

TABLE C—NATURAL INCREASE AND NATURAL INCREASE RATES,  
ONTARIO, 1922-1950

Year	Live Births	Deaths	Excess of Births over Deaths	Natural Increase Rate per 1,000 Population
1922.....	71,430	34,034	37,396	12.6
1923.....	70,056	35,636	34,420	11.5

1950.....	108,708	43,948	64,760	14.3

A slight decrease in the birth rate was evident in 1944 and 1945, a definite increase for the years 1946, 1947, 1948, 1949 and 1950 with the year 1947 showing the highest rate ever obtained.

### Births

Table D presents an historical summary of births, stillbirths and illegitimate births, together with computed rates for each, while Chart 1 portrays the general trends over the same period.

TABLE D—SUMMARY OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS, AND RATES, ONTARIO, 1922-1950

Year	LIVE BIRTHS		STILLBIRTHS		ILLEGITIMATE BIRTHS	
	Number	Rate per 1,000 Population	Number	Rate per 1,000 Live Births	Number	Rate per 1,000 Live Births

1941.....	72,262	19.1	2,084	28.8	3,384	46.8
1942.....	78,192	20.1	2,088	26.7	3,789	48.5
1943.....	81,173	20.7	2,060	25.4	3,741	46.1
1944.....	78,090	19.7	1,866	23.9	3,764	48.2
1945.....	78,974	19.7	1,844	23.3	4,075	51.6
1946.....	97,446	23.8	2,016	20.7	4,165	42.7
1947.....	108,853	26.0	2,176	20.0	4,748	43.6
1948.....	104,195	24.2	1,972	18.9	4,795	46.0
1949.....	106,601	24.2	2,002	18.7	3,802	35.6
1950.....	108,708	24.1	1,932	17.8	3,772	34.7

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly in 1948, 1949 and 1950, when the rate was 24.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1950 for every 1,000 babies born alive, 17 were stillborn.

It is to be noted that the number of illegitimate births for the year 1950 had dropped to 3,772. This figure represents children born to single mothers. Tables 10, 11 and 13 show that there were 518 children born to widowed, divorced and separated mothers.

Tables E, F and G provide a breakdown of births by age of mothers for the same three groups, and indicate to some degree the extent to which age has contributed to the trends outlined above, while Chart 2 provides an interesting picture of the age distribution over the same period on the basis of five-year averages.

Chart 2

PERCENTAGE OF  
LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS  
IN EACH AGE GROUP OF MOTHERS  
ONTARIO

FIVE-YEAR AVERAGES 1931-1945  
AND FOR THE YEAR 1950

LEGEND

There has been a general tendency towards younger motherhood. Of every 100 babies born alive in 1950, 7 were to mothers under 20 years of age, 28 to mothers 20-24, and 31 to mothers 25-29, or a total of 66 children to mothers under 30 years of age.

There are indications that the number of stillbirths per 1,000 deliveries has been decreasing at an encouraging rate and that this has been evident for each age-group of mothers under 40 years of age. For example, of every 1,000 deliveries among mothers 15-19 in 1950, 16 were stillborn as compared with 29 in the period 1922-27; among mothers 20-24 years of age, 14 as compared with 30; among mothers 25-29 years of age, 16 as compared with 33, with similar encouraging figures for older mothers, although the risk of stillbirth delivery increases rapidly for mothers over 35 years of age.

AVERAGE NUMBER OF STILLBIRTHS PER 1,000 DELIVERIES

Years	AGE OF MOTHER					
	15-19	20-24	25-29	30-34	35-39	40 and over
1922-27.....	29	30	33	39	49	64
1928-32.....	27	27	30	37	48	63
1933-37.....	27	25	28	34	45	64
1938-42.....	24	21	25	31	43	58
1943-47.....	18	17	20	24	33	47
1948.....	15	16	15	22	29	38
1949.....	17	15	15	20	29	40
1950.....	16	14	16	17	29	47

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1950, 75 were to this group of mothers.

### Infant Mortality

Table H and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period. The neonatal rate for 1949 was 23.4 per 1,000 live births as compared with 22.6 in 1950.

1949 .....	37
1950 .....	34

### Sixth Revision of the International Lists of Diseases and Causes of death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1950 being 552 as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" show a considerable increase.

### Maternal Mortality

From Table K, it will be noted that a considerable reduction in the number of deaths of mothers during childbirth has taken place during the past 20 years, and particularly during the past 5 years, with the 1950 rate being considerably below the average of the last decade. In general, the reduction in the rate seems to be apparent in all age groups.

TABLE K—MATERNAL DEATHS, AND RATE PER 1,000 LIVE BIRTHS, BY AGE, ONTARIO, 1941-1950, WITH FIVE YEAR AVERAGES, 1931-1950

\* Rates not computed because of small numbers.

The tables which follow present the distribution of maternal deaths during 1950 by locality.

The rates shown in Table L are of special interest in that they indicate clearly the general downward trend in maternal mortality in cities, towns and rural areas of the province, the rates for 1950 being 0.7 per 1,000 live births in cities, 0.7 in towns and 1.0 in the rural areas.

TABLE L—MATERNAL MORTALITY AND RATE PER 1,000 LIVE BIRTHS, CLASSIFIED BY CITIES, TOWNS AND RURAL AREAS, ONTARIO, 1937-1950

(2) " " 5,000 to 10,000.

### General Mortality

Table M presents an historical summary of deaths by sex in the province and the computed crude death rates over a 28-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

**TABLE M—DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1923-1950**

Year	DEATHS			RATE PER 1,000 POPULATION

1950.....	43,948	24,502	19,446	9.7	10.7	8.7

Table N presents both male and female crude death rates for each 5-year age-group, based on the population as enumerated at the censuses of 1941 and as estimated for the years 1943 to 1950. There are several features with respect to changing death rates which are worthy of comment, notable among which is the remarkable decrease in the death rate of children under 5 years of age from 13.5 in 1943 to 10.6 in 1950 for males and from 10.5 in 1943 to 7.9 in 1950 for females. Similar declines are apparent in other age-groups.

This latter fact is clearly portrayed in Chart 4 which depicts the percentage of deaths occurring in each age-group of the population.

## Causes of Death

The deaths shown in Table O (1) are for selected causes or groups of causes to which, during the past 10 year period, more than 75 per cent of total deaths have been recorded. A large part of the increase in certain diseases for the year 1950 is due to the new selection procedure as outlined by the Sixth Revision of the International Lists of Diseases and Causes of Death.

Chart 4

PERCENTAGE OF TOTAL DEATHS  
IN EACH AGE-GROUP

1921, 1931, 1941 AND 1950

TABLE O (1)—SELECTED CAUSES OF DEATH IN ONTARIO, 1950  
Sixth Revision of the International Lists of Diseases and Causes of Death

Int. List No.	CAUSES OF DEATH	Number of deaths	Per cent of deaths (1)	Rate per 100,000 population (2)
401, 410-443	Diseases of the heart.....	16,074	36.6	356.2
140-205	Cancer (all forms) (3).....	6,317	14.4	140.0
330-334	Intracranial lesions of vascular origin.....	5,614	12.8	124.4
800-999	Accidental and Violent deaths.....	3,099	7.0	68.7
480-483				
490-493				
500-502, 763	Pneumonia, bronchitis and influenza.....	2,025	4.6	44.9
760-762				
764-773	Other diseases of early infancy.....	1,149	2.6	25.5
450-456	Diseases of the arteries.....	1,098	2.5	24.3
774-776	Immaturity.....	786	1.8	17.4
750-759	Congenital malformations.....	777	1.8	17.2
590-594	Nephritis and nephrosis.....	694	1.6	15.4
001-019	Tuberculosis.....	585	1.3	13.0
260	Diabetes.....	552	1.2	12.2

(1) Per cent of total deaths.

(2) Rate per 100,000 population.

(3) Includes Hodgkin's disease and the leukaemias.

NOTE.—Previous to 1950 deaths from late effects of acute poliomyelitis and acute infectious encephalitis were not tabulated separately

Chart 5

DEATHS FROM  
TUBERCULOSIS, CANCER AND PNEUMONIAONTARIO, 1900-50  
Rates per 100,000 population

## Mortality from Tuberculosis

Table R (1) shows the deaths from all forms of tuberculosis in the province from 1941 to 1950. Table R (2) shows the death rates per 100,000 population classified by the age of the decedents for 1946, 1947, 1948, 1949 and 1950. During the year 1950 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 13.0 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table Z in Part 1 of this report gives details of deaths and death rates for counties according to place of occurrence and place of residence for the year 1950.

### Mortality from Cancer

Chart 5 illustrates the steady upward trend in the mortality rate from cancer. The increase in the total number of deaths since 1941 is shown in Table S (1) and is apparent in most of the age-groups particularly among older persons. Table S (2) shows the rate from 1941 to 1950 by sex and indicates that the female rate is higher than the male rate, but the death rate for males has increased more rapidly than that for females.

**TABLE S (1)—DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1941-1950**

### Mortality from Pneumonia, Bronchitis and Influenza

In Chart 5 is a curve showing the trend in the death rate from pneumonia.

Table U shows the number of deaths from influenza, bronchitis and pneumonia and indicated the fluctuation in the number of deaths recorded as due to influenza.

### Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1925 to 1950.

TABLE W—MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1925-1950

Year	Number	Rate per 1,000 Population	Year	Number	Rate per 1,000 Population
1925.....	23,074	7.4	1938.....	30,080	8.2

1937.....	29,893	8.2	1950.....	43,774	9.7

### Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past three censuses.

	1921*	1931	1941
Divorced persons—Male.....	1,135	1,071	2,291
Female.....	1,369	1,015	2,865
Per cent of population—Male.....	0.08	0.06	0.12
Female.....	0.09	0.06	0.15

\*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

**TABLE X—DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1950, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1950**

TO HIS HONOUR THE LIEUTENANT-GOVERNOR OF THE PROVINCE OF ONTARIO

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Eighty-second Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario during the year 1951.

Respectfully submitted,

G. H. DUNBAR,  
*Registrar-General of Ontario.*

SIR:

I have the honour to submit for your approval the Eighty-second Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1951.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,  
*Deputy Registrar-General.*

TO THE HON. G. H. DUNBAR,  
*Registrar-General of Ontario.*

## INTRODUCTION

This report is divided into two parts. Part I consists of an analytical survey of the Vital Statistics of the province in the form of narrative summaries, summary tables and charts. Its objectives are (1) to indicate (in so far as can be portrayed by vital statistics) the general trend over the past several years, in the general state of the health of the people of Ontario; (2) to assess the vital statistics of 1951 in the light of these general trends; and (3) to bring to light certain specific problems in the field of public health, such as infant and maternal mortality and deaths from specific diseases such as cancer and tuberculosis and those resulting from accidental causes. Part II consists of detailed tables covering vital statistics for the year 1951. In the interests of economy several tables are not printed in this report. These are listed in the Table of Contents and the information is available upon request providing that such requests, in the opinion of the Registrar-General, are sufficiently warranted and urgent in the public interest.

## PART I.—COMPARATIVE AND ANALYTICAL SUMMARY

## Population

For reference purposes the estimated population of the province over a period of about two decades is shown by sex in Table A, while a distribution by sex and age-groups of the census population of 1951 is provided in Table B.

TABLE A—POPULATION, CENSUSES 1921, 1931, 1941 AND 1951 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX, ONTARIO

Year	Total	Male	Female	Year	Total	Male	Female
1921	2,933,662	1,481,890	1,451,772	1936	3,605,500	1,840,000	1,765,500
1922	2,980,000	1,501,300	1,478,700	1937	3,637,000	1,851,200	1,785,800
1923	3,013,000	1,512,600	1,500,400	1938	3,672,000	1,867,900	1,804,000
1924	3,059,000	1,531,900	1,527,100	1939	3,708,000	1,884,500	1,823,500
1925	3,111,000	1,533,000	1,558,000	1940	3,747,000	1,902,700	1,844,300

Figures supplied by Social Analysis Branch, Dominion Bureau of Statistics.

\*These estimates do not take into account interprovincial migration, figures for which are not available for intercensal years.

The rural and urban distribution of the 1951 census population was as follows:—

Population Group	Census Population	Per cent
Incorporated centres 10,000 population and over.....	2,007,440	43.6
Incorporated centres 5,000 to 10,000 population.....	281,003	6.1
Incorporated centres 1,000 to 5,000 population.....	377,718	8.2
Rural population (including incorporated centres under 1,000).....	1,931,381	42.0

Births and deaths for the year 1951 are classified by place of residence, marriages being classified by place of occurrence.

Tables 7, 8, 23, 24, 30 and 31 have totals by place of occurrence and place of residence.

### Natural Increase

The natural increase in the population and the computed rates for the period 1922 to 1951 are shown in Table C.

TABLE C—NATURAL INCREASE AND NATURAL INCREASE RATES,  
ONTARIO, 1922-1951

Year	Live Births	Deaths	Excess of Births over Deaths	Natural Increase Rate per 1,000 Population
1922.....	71,430	34,034	37,396	12.5
1923.....	70,056	35,636	34,420	11.4
1924.....	71,510	33,078	38,432	12.5
1925.....	70,122	33,960	36,162	11.6
1926.....	67,617	35,909	31,708	10.0
1927.....	67,671	34,775	32,896	10.2
1928.....	68,510	37,128	31,382	9.5
1929.....	68,458	38,123	30,335	9.1
1930.....	71,263	37,313	33,950	10.0
1931.....	69,209	35,705	33,504	9.7
1932.....	66,842	36,469	30,373	8.7
1933.....	63,646	35,301	28,345	8.1
1934.....	62,234	35,119	27,115	7.7
1935.....	63,069	36,317	26,752	7.5
1936.....	62,451	37,571	24,880	6.9
1937.....	61,645	38,475	23,170	6.3
1938.....	65,564	36,890	28,674	7.8
1939.....	64,123	37,530	26,593	7.1
1940.....	68,524	38,503	30,021	8.0
1941.....	72,262	39,226	33,036	8.7
1942.....	78,192	39,119	39,073	10.1
1943.....	81,173	41,063	40,110	10.2
1944.....	78,090	39,781	38,309	9.7
1945.....	78,974	39,499	39,475	9.8
1946.....	97,446	39,758	57,688	14.1
1947.....	108,853	41,619	67,234	16.1
1948.....	104,195	42,364	61,831	14.5
1949.....	106,601	43,379	63,222	14.4
1950.....	108,708	43,948	64,760	14.5
1951.....	114,827	43,981	70,846	15.4

A slight decrease in the rate was evident in 1944 and 1945, a definite increase for the years 1946, 1947, 1948, 1949, 1950 with the year 1951 showing the highest rate ever obtained.

### Births

Table D presents an historical summary of births, stillbirths and illegitimate births, together with computed rates for each, while Chart 1 portrays the general trends over the same period.

TABLE D—SUMMARY OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS, AND RATES, ONTARIO, 1922-1951

Year	LIVE BIRTHS		STILLBIRTHS		ILLEGITIMATE BIRTHS	
	Number	Rate per 1,000 Population	Number	Rate per 1,000 Live Births	Number	Rate per 1,000 Live Births
1922.....	71,430	24.0	3,115	43.6	1,519	21.3
1923.....	70,056	23.3	3,028	43.2	1,579	22.5
1924.....	71,510	23.4	2,594	36.3	1,717	24.0
1925.....	70,122	22.5	2,782	39.7	1,881	26.8

1933.....	63,646	18.1	2,161	33.9	2,786	43.7
1934.....	62,234	17.6	2,091	33.5	2,500	40.1
1935.....	63,069	17.6	2,140	33.9	2,642	41.9
1936.....	62,451	17.3	2,034	32.5	2,788	44.6
1937.....	61,645	16.9	1,988	32.2	2,796	45.3
1938.....	65,564	17.9	2,015	30.7	3,061	46.7
1939.....	64,123	17.3	1,965	30.6	2,884	44.9
1940.....	68,524	18.3	2,037	29.7	3,167	46.2
1941.....	72,262	19.1	2,084	28.8	3,384	46.8
1942.....	78,192	20.1	2,088	26.7	3,789	48.5
1943.....	81,173	20.7	2,060	25.3	3,741	46.1
1944.....	78,090	19.7	1,866	23.9	3,764	48.2
1945.....	78,974	19.7	1,844	23.3	4,075	51.5
1946.....	97,446	23.8	2,016	20.7	4,165	42.7
1947.....	108,853	26.1	2,176	19.9	4,748	43.6
1948.....	104,195	24.4	1,972	18.9	4,795	46.0
1949.....	106,601	24.3	2,002	18.8	3,802	35.7
1950.....	108,708	24.3	1,932	17.8	3,772	34.7
1951.....	114,827	25.0	1,975	17.2	3,807	33.2

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly in 1948, 1949, 1950 and 1951 when the rate was 25.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1951 for every 1,000 babies born alive, 17 were stillborn.

It is to be noted that the number of illegitimate births for the year 1951 is 3,802. This figure represents children born to single mothers. Tables 10, 11 and 13 show that there were 468 children born to widowed, divorced and separated mothers.

Tables E, F and G provide a breakdown of births by age of mothers for the same three groups, and indicate to some degree the extent to which age has contributed to the trends outlined above, while Chart 2 provides an interesting picture of the age distribution over the same period on the basis of five-year averages.

NOTE:—Births to mothers of "not stated" ages have been distributed on the basis of specified ages.

Chart 2

PERCENTAGE OF  
**LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS**  
 IN EACH AGE GROUP OF MOTHERS  
 ONTARIO  
 FIVE-YEAR AVERAGES 1936-1940  
 AND FOR THE YEAR 1951

There has been a general tendency towards younger motherhood. Of every 100 babies born alive in 1951, 8 were to mothers under 20 years of age, 28 to mothers 20-24, and 31 to mothers 25-29, or a total of 67 children to mothers under 30 years of age.

There are indications that the number of stillbirths per 1,000 live births has been decreasing at an encouraging rate and that this has been evident for each age-group of mothers under 40 years of age. For example, for every 1,000 deliveries among mothers 15-19 in 1951, there were 17 stillbirths as compared with 29 in the period 1922-27; among mothers 20-24 years of age 13 as compared with 30; among mothers 25-29 years of age, 14 as compared with 33, with similar encouraging figures for older mothers, although the risk of stillbirth delivery increases rapidly for mothers over 35 years of age.

AVERAGE NUMBER OF STILLBIRTHS PER 1,000 LIVE BIRTHS

Years	AGE OF MOTHER					
	15-19	20-24	25-29	30-34	35-39	40 and over
1922-27.....	29	30	33	39	49	64
1928-32.....	27	27	30	37	48	63
1933-37.....	27	25	28	34	45	64
1938-42.....	24	21	25	31	43	58
1943-47.....	18	17	20	24	33	47
1948.....	15	16	15	22	30	39
1949.....	17	15	16	21	29	41
1950.....	16	14	16	17	29	47
1951.....	17	13	14	19	27	47

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1951, 76 were to this group of mothers.

### Infant Mortality

Table H and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period. The neonatal rate for 1950 was 22.5 per 1,000 live births as compared with 21.1 in 1951.

The following summary indicates the number of infant deaths per 1,000 live births.

Years	Infant Deaths per 1,000 Live Births
1931-35 .....	61
1936-40 .....	50
1941-45 .....	42
1946-50 .....	36
1951 .....	31

### Sixth Revision of the International Lists of Diseases and Causes of death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1950 being 552, 584 in 1951, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" show a considerable increase.

### Maternal Mortality

From Table K, it will be noted that a considerable reduction in the number of deaths of mothers during childbirth has taken place during the past 20 years, and particularly during the past 5 years, with the 1951 rate being considerably below the average of the last decade. In general, the reduction in the rate seems to be apparent in all age groups.

TABLE K—MATERNAL DEATHS, AND RATE PER 1,000 LIVE BIRTHS, BY AGE, ONTARIO, 1942-1951, WITH FIVE YEAR AVERAGES, 1936-1950

\* Rates not computed because of small numbers.

The tables which follow present the distribution of maternal deaths during 1951 by locality.

The rates shown in Table L are of special interest in that they indicate clearly the general downward trend in maternal mortality in cities, towns and rural areas of the province, the rates for 1951 being 0.8 per 1,000 live births in cities, 0.7 in towns and 0.9 in the rural areas.

(2) " " 5,000 to 10,000.

### General Mortality

Table M presents an historical summary of deaths by sex in the province and the computed crude death rates over a 28-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

**TABLE M—DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1924-1951**

Year	DEATHS			RATE PER 1,000 POPULATION		
	Total	Male	Female	Total	Male	Female

1950.....	43,948	24,502	19,446	9.8	10.9	8.7
1951.....	43,981	24,483	19,498	9.5	10.5	8.5

Table N presents both male and female crude death rates for each 5-year age-group, based on the population as enumerated at the censuses of 1941 and 1951 and as estimated for the years 1944 to 1950. There are several features with respect to changing death rates which are worthy of comment, notable among which is the remarkable decrease in the death rate of children under 5 years of age from 12.7 in 1944 to 8.9 in 1951 for males and from 10.1 in 1944 to 7.1 in 1951 for females. Similar declines are apparent in other age-groups.

This latter fact is clearly portrayed in Chart 4 which depicts the percentage of deaths occurring in each age-group of the population.

### Causes of Death

The deaths shown in Table O (1) are for selected causes or groups of causes to which, during the past 10 year period, more than 75 per cent of total deaths have been recorded. A large part of the increase in certain diseases for the years 1950 and 1951 is due to the new selection procedure as outlined by the Sixth Revision of the International Lists of Diseases and Causes of Death.

Chart 4

# PERCENTAGE OF TOTAL DEATHS IN EACH AGE-GROUP

1921, 1931, 1941 AND 1951

Chart 5

# DEATHS FROM TUBERCULOSIS, CANCER AND PNEUMONIA

ONTARIO, 1900-51

Rates per 100,000 population

## Mortality from Tuberculosis

Table R (1) shows the deaths from all forms of tuberculosis in the province from 1942 to 1951. Table R (2) shows the death rates per 100,000 population classified by the age of the decedents for 1947, 1948, 1949, 1950, and 1951. During the year 1951 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 12.5 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table Z in Part 1 of this report gives details of deaths and death rates for counties according to place of occurrence and place of residence for the year 1951.

### Mortality from Cancer

Chart 5 illustrates the steady upward trend in the mortality rate from cancer. The increase in the total number of deaths since 1942 is shown in Table S (1) and is apparent in most of the age-groups particularly among older persons. Table S (2) shows the rate from 1942 to 1951 by sex and indicates that the female rate is higher than the male rate, but the death rate for males has increased more rapidly than that for females.

TABLE S (1)—DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1942-1951

### Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1925 to 1951.

TABLE W—MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1925-1951

Year	Number	Rate per 1,000 Population	Year	Number	Rate per 1,000 Population
1925.....	23,074	7.4	1938.....	30,080	8.1
1926.....	23,632	7.5	1939.....	34,657	9.3
1927.....	24,677	7.7	1940.....	41,229	11.0
1928.....	25,728	7.8	1941.....	43,270	11.4
1929.....	27,605	8.3	1942.....	45,466	11.7
1930.....	25,605	7.5	1943.....	36,109	9.2
1931.....	23,771	6.9	1944.....	31,227	7.9

1935.....	26,843	7.5	1948.....	43,242	10.1
1936.....	27,734	7.7	1949.....	43,304	9.9
1937.....	29,893	8.2	1950.....	43,774	9.7
			1951.....	45,198	9.8

### Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past four censuses.

	1921*	1931	1941	1951
Divorced persons—Male.....	1,135	1,071	2,291	4,766
Female.....	1,369	1,015	2,865	7,668
Per cent of population—Male.....	0.08	0.06	0.12	0.20
Female.....	0.09	0.06	0.15	0.33

\*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

**TABLE X—DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1951, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1951**

Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females
									Hus-bands	Wives	
1919	46	1.6	1927	181	5.6	1935	491	13.7	180	311	579

TO HIS HONOUR THE LIEUTENANT-GOVERNOR OF THE PROVINCE OF ONTARIO  
MAY IT PLEASE YOUR HONOUR:

I herewith<sup>l</sup> beg to present for your consideration the Eighty-third Annual Report of the<sup>r</sup> Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario during the year 1952.

Respectfully submitted,

G. H. DUNBAR,  
*Registrar-General of Ontario.*

SIR:

I have the honour to submit for your approval the Eighty-third Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1952.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,  
*Deputy Registrar-General.*

TO THE HON. G. H. DUNBAR,  
*Registrar-General of Ontario.*

## INTRODUCTION

This report is divided into two parts. Part I consists of an analytical survey of the Vital Statistics of the province in the form of narrative summaries, summary tables and charts. Its objectives are (1) to indicate (in so far as can be portrayed by vital statistics) the general trend over the past several years, in the general state of the health of the people of Ontario; (2) to assess the vital statistics of 1952 in the light of these general trends; and (3) to bring to light certain specific problems in the field of public health, such as infant and maternal mortality and deaths from specific diseases such as cancer and tuberculosis and those resulting from accidental causes. Part II consists of detailed tables covering vital statistics for the year 1952. In the interests of economy several tables are not printed in this report. These are listed in the Table of Contents and the information is available upon request providing that such requests, in the opinion of the Registrar-General, are sufficiently warranted and urgent in the public interest.

## PART I.—COMPARATIVE AND ANALYTICAL SUMMARY

## Population

For reference purposes the estimated population of the province over a period of about three decades is shown by sex in Table A, while a distribution by sex and age-groups of the estimated population of 1952 is provided in Table B.

TABLE A—POPULATION, CENSUSES 1921, 1931, 1941 AND 1951 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX, ONTARIO

Year	Total	Male	Female	Year	Total	Male	Female
1921	2,933,662	1,481,890	1,451,772	1937	3,637,000	1,851,200	1,785,800
1922	2,980,000	1,501,300	1,478,700	1938	3,672,000	1,867,900	1,804,000
1923	3,013,000	1,512,600	1,500,400	1939	3,708,000	1,884,500	1,823,500
1924	3,059,000	1,531,900	1,527,100	1940	3,747,000	1,902,700	1,844,300
1925	3,111,000	1,533,000	1,558,000	1941	3,787,655	1,921,201	1,866,454
1926	3,164,300	1,576,100	1,588,200	1942	3,884,000	1,966,400	1,917,600
1927	3,219,000	1,611,900	1,607,100	1943	3,915,000	1,981,600	1,933,400
1928	3,278,000	1,651,500	1,626,500	1944	3,963,000	2,004,600	1,958,400
1929	3,334,000	1,685,500	1,648,500	1945	4,000,000	2,014,600	1,985,400
1930	3,386,000	1,718,700	1,667,300	1946	4,093,000	2,064,300	2,028,700
1931	3,431,683	1,748,844	1,682,839	1947	4,176,000	2,106,400	2,069,600
1932	3,473,000	1,768,300	1,704,700	1948	4,275,000	2,158,900	2,116,100
1933	3,512,000	1,788,300	1,723,700	1949	4,378,000	2,210,500	2,167,500
1934	3,544,000	1,804,400	1,739,600	1950	4,471,000	2,249,700	2,221,300
1935	3,575,000	1,820,500	1,754,500	1951	4,597,542	2,314,170	2,283,372
1936	3,605,500	1,840,000	1,765,500	1952	4,766,000	2,406,400	2,359,600

The estimated populations for 1922 to 1930, 1932 to 1940 and 1942 to 1950 have been revised and the necessary adjustments have been made in the tables showing rates.

TABLE B—ESTIMATED POPULATION OF ONTARIO, BY SEX AND AGE-GROUP, 1952

Figures supplied by Social Analysis Branch, Dominion Bureau of Statistics.

\*These estimates do not take into account interprovincial migration, figures for which are not available for intercensal years.

The rural and urban distribution of the 1952 population was as follows:—

Population Group	Assessed Population	Per cent
Incorporated centres 10,000 population and over.....	2,151,183	45.1
Incorporated centres 5,000 to 10,000 population.....	248,843	5.2
Incorporated centres 1,000 to 5,000 population.....	343,418	7.2
Rural population (including incorporated centres under 1,000).....	2,022,556	42.4

Births and deaths for the year 1952 are classified by place of residence, marriages being classified by place of occurrence.

Tables 5, 6, 17, 18, 22 and 23 have totals by place of occurrence and place of residence.

### Natural Increase

The natural increase in the population and the computed rates for the period 1923 to 1952 are shown in Table C.

TABLE C—NATURAL INCREASE AND NATURAL INCREASE RATES,  
ONTARIO, 1923-1952

Year	Live Births	Deaths	Excess of Births over Deaths	Natural Increase Rate per 1,000 Population
1923.....	70,056	35,636	34,420	11.4
1924.....	71,510	33,078	38,432	12.5
1925.....	70,122	33,960	36,162	11.6
1926.....	67,617	35,909	31,708	10.0
1927.....	67,671	34,775	32,896	10.2
1928.....	68,510	37,128	31,382	9.5
1929.....	68,458	38,123	30,335	9.1
1930.....	71,263	37,313	33,950	10.0
1931.....	69,209	35,705	33,504	9.7
1932.....	66,842	36,469	30,373	8.7
1933.....	63,646	35,301	28,345	8.1
1934.....	62,234	35,119	27,115	7.7
1935.....	63,069	36,317	26,752	7.5
1936.....	62,451	37,571	24,880	6.9
1937.....	61,645	38,475	23,170	6.3
1938.....	65,564	36,890	28,674	7.8
1939.....	64,123	37,530	26,593	7.1
1940.....	68,524	38,503	30,021	8.0
1941.....	72,262	39,226	33,036	8.7
1942.....	78,192	39,119	39,073	10.1
1943.....	81,173	41,063	40,110	10.2
1944.....	78,090	39,781	38,309	9.7
1945.....	78,974	39,499	39,475	9.8
1946.....	97,446	39,758	57,688	14.1
1947.....	108,853	41,619	67,234	16.1
1948.....	104,195	42,364	61,831	14.5
1949.....	106,601	43,379	63,222	14.4
1950.....	108,708	43,948	64,760	14.5
1951.....	114,827	43,981	70,846	15.4
1952.....	123,891	44,402	78,489	16.7

A slight decrease in the rate was evident in 1944 and 1945, a definite increase for the years 1946 to 1952 with the year 1952 showing the highest rate ever obtained.

TABLE D—SUMMARY OF VITAL STATISTICS BY MONTHS,

### Births

Table E presents an historical summary of births, stillbirths and illegitimate births, together with computed rates for each, while Chart 1 portrays the general trends over the same period.

TABLE E—SUMMARY OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS, AND RATES, ONTARIO, 1923-1952

Year	LIVE BIRTHS		STILLBIRTHS		ILLEGITIMATE BIRTHS	
	Number	Rate per 1,000 Population	Number	Rate per 1,000 Live Births	Number	Rate per 1,000 Live Births
1923.....	70,056	23.3	3,028	43.2	1,579	22.5

1941.....	72,262	19.1	2,084	28.8	3,384	46.8
1942.....	78,192	20.1	2,088	26.7	3,789	48.5
1943.....	81,173	20.7	2,060	25.3	3,741	46.1
1944.....	78,090	19.7	1,866	23.9	3,764	48.2
1945.....	78,974	19.7	1,844	23.3	4,075	51.5
1946.....	97,446	23.8	2,016	20.7	4,165	42.7
1947.....	108,853	26.1	2,176	19.9	4,748	43.6
1948.....	104,195	24.4	1,972	18.9	4,795	46.0
1949.....	106,601	24.3	2,002	18.8	3,802	35.7
1950.....	108,708	24.3	1,932	17.8	3,772	34.7
1951.....	114,827	25.0	1,975	17.2	3,807	33.2
1952.....	123,891	26.0	2,085	16.8	3,920	31.6

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951 and 1952.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1952 for every 1,000 babies born alive, 16 were stillborn.

With respect to illegitimacy, Table H and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1952, 76 were to this group of mothers.

Tables F, G and H provide a breakdown of births by age of mothers for the same three groups, and indicate to some degree the extent to which age has contributed to the trends outlined above, while Chart 2 provides an interesting picture of the age distribution over the same period on the basis of five-year averages.

43 weeks and over.....	10	13
Not stated.....	67	65
<b>Total.....</b>	<b>1,020</b>	<b>1,065</b>

There are indications that the number of stillbirths per 1,000 live births has been decreasing at an encouraging rate and that this has been evident for each age-group of mothers under 40 years of age. For example, for every 1,000 deliveries among mothers 15-19 in 1952, there were 13 stillbirths as compared with 29 in the period 1922-27; among mothers 20-24 years of age 13 as compared with 30; among mothers 25-29 years of age, 15 as compared with 33, with similar encouraging figures for older mothers, although the risk of stillbirth delivery increases rapidly for mothers over 35 years of age.

**AVERAGE NUMBER OF STILLBIRTHS PER 1,000 LIVE BIRTHS**

Years	AGE OF MOTHER

### Infant Mortality

Table J and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period. The neonatal rate for 1951 was 21.1 per 1,000 live births as compared with 20.7 in 1952.

### Sixth Revision of the International Lists of Diseases and Causes of death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1950 being 552, 584 in 1951, 529 in 1952, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" show a considerable increase.

## Maternal Mortality

From Table M, it will be noted that a considerable reduction in the number of deaths of mothers during childbirth has taken place during the past 20 years, and particularly during the past 5 years, with the 1952 rate being considerably below the average of the last decade. In general, the reduction in the rate seems to be apparent in all age groups.

(2) " " 5,000 to 10,000.

## General Mortality

Table O presents an historical summary of deaths by sex in the province and the computed crude death rates over a 28-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

**TABLE O—DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1925-1952**

Year	DEATHS			RATE PER 1,000 POPULATION		
	Total	Male	Female	Total	Male	Female

1951.....	43,981	24,483	19,498	9.5	10.5	8.5
1952.....	44,402	25,072	19,330	9.3	10.4	8.2

Table P presents both male and female crude death rates for each 5-year age-group, based on the population as enumerated at the censuses of 1941 and 1951 and as estimated for the years 1944 to 1950 and for the year 1952. There are several features with respect to changing death rates which are worthy of comment, notable among which is the remarkable decrease in the death rate of children under 5 years of age from 11.6 in 1945 to 9.2 in 1952 for males and from 9.3 in 1945 to 7.1 in 1952 for females. Similar declines are apparent in other age-groups.

This latter fact is clearly portrayed in Chart 4 which depicts the percentage of deaths occurring in each age-group of the population.

### Causes of Death

The deaths shown on Table Q (1) are for selected causes or groups of causes to which, during the past 10 year period, more than 75 per cent of total deaths have been recorded. A large part of the increase in certain diseases for the years 1950, 1951 and 1952 is due to the new selection procedure as outlined by the Sixth Revision of the International Lists of Diseases and Causes of Death.

Chart 4

Chart 5

DEATHS FROM  
TUBERCULOSIS, CANCER AND PNEUMONIA  
ONTARIO, 1900-52

Rates per 100,000 population

## Mortality from Tuberculosis

Table T (1) shows the deaths from all forms of tuberculosis in the province from 1943 to 1952. Table T (2) shows the death rates per 100,000 population classified by the age of the decedents for 1947, 1948, 1949, 1950, 1951 and 1952. During the year 1952 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 8.4 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table Z in Part 1 of this report gives details of deaths and death rates for counties according to place of occurrence and place of residence for the year 1952.

## Mortality from Cancer

Chart 5 illustrates the steady upward trend in the mortality rate from cancer. The increase in the total number of deaths since 1943 is shown in Table U (1) and is apparent in most of the age-groups particularly among older persons. Table U (2) shows the rate from 1943 to 1952 by sex.

TABLE U (1)—DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1943-1952

NOTE: Total deaths for cancer for the years 1943-1952 include Hodgkin's disease and the leukaemias.

### Mortality from Pneumonia, Bronchitis and Influenza

In Chart 5 is a curve showing the trend in the death rate from pneumonia.

Table W shows the number of deaths from influenza, bronchitis and pneumonia and indicates the fluctuation in the number of deaths recorded as due to influenza.

**TABLE W—DEATHS FROM PNEUMONIA, BRONCHITIS AND INFLUENZA  
IN ONTARIO, 1942-1952**

CAUSE	1942	1943	1944	1945	1946	1947	1948	1949	1950	1951	1952

### Marriages

From Table X it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1952.

**TABLE X—MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION,  
ONTARIO, 1933-1952**

Year	Number	Rate per 1,000 Population	Year	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1943.....	36,109	9.2

1939.....	34,657	9.3	1949.....	43,304	9.9
1940.....	41,229	11.0	1950.....	43,774	9.7
1941.....	43,270	11.4	1951.....	45,198	9.8
1942.....	45,466	11.7	1952.....	45,251	9.5

### Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past four censuses.

	1921*	1931	1941	1951
Divorced persons—Male.....	1,135	1,071	2,291	4,766
Female.....	1,369	1,015	2,865	7,668
Per cent of population—Male.....	0.08	0.06	0.12	0.20
Female.....	0.09	0.06	0.15	0.33

\*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table Y. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

**TABLE Y—DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1952, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1952**

Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females

TO HIS HONOUR THE LIEUTENANT-GOVERNOR OF THE PROVINCE OF ONTARIO  
MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Eighty-fourth Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario during the year 1953.

Respectfully submitted,

G. H. DUNBAR,  
*Registrar-General of Ontario.*

SIR:

I have the honour to submit for your approval the Eighty-fourth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1953.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,  
*Deputy Registrar-General.*

TO THE HON. G. H. DUNBAR,  
*Registrar-General of Ontario.*

## INTRODUCTION

This report is divided into two parts. Part I consists of an analytical survey of the Vital Statistics of the province in the form of narrative summaries, summary tables and charts. Its objectives are (1) to indicate (in so far as can be portrayed by vital statistics) the general trend over the past several years, in the general state of the health of the people of Ontario; (2) to assess the vital statistics of 1953 in the light of these general trends; and (3) to bring to light certain specific problems in the field of public health, such as infant and maternal mortality and deaths from specific diseases such as cancer and tuberculosis and those resulting from accidental causes. Part II consists of detailed tables covering vital statistics for the year 1953.

## PART I.—COMPARATIVE AND ANALYTICAL SUMMARY

## Population

For reference purposes the estimated population of the province over a period of about three decades is shown by sex in Table A, while a distribution by sex and age-groups of the estimated population of 1953 is provided in Table B.

TABLE A—POPULATION, CENSUSES 1921, 1931, 1941 AND 1951 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX, ONTARIO

Year	Total	Male	Female	Year	Total	Male	Female
1921	2,933,662	1,481,890	1,451,772	1938	3,672,000	1,867,900	1,804,000
1922	2,980,000	1,501,300	1,478,700	1939	3,708,000	1,884,500	1,823,500
1923	3,013,000	1,512,600	1,500,400	1940	3,747,000	1,902,700	1,844,300
1924	3,059,000	1,531,900	1,527,100	1941	3,787,655	1,921,201	1,866,454
1925	3,111,000	1,533,000	1,558,000	1942	3,884,000	1,966,400	1,917,600
1926	3,164,300	1,576,100	1,588,200	1943	3,915,000	1,981,600	1,933,400

30-44.....	1,064,900	536,800	528,100	90 and over	5,300	1,900	3,400
45-49.....	285,600	147,800	137,800	Total.....	4,897,000	2,471,900	2,425,100

Figures supplied by Social Analysis Branch, Dominion Bureau of Statistics.

\*These estimates do not take into account interprovincial migration, figures for which are not available for intercensal years.

The rural and urban distribution of the 1953 population was as follows:—

Population Group	Assessed Population	Per cent
Incorporated centres *10,000 population and over.....	2,181,466	44.5
Incorporated centres *5,000 to 10,000 population.....	255,625	5.2
Incorporated centres *1,000 to 5,000 population.....	355,421	7.3
Rural population (including incorporated centres under *1,000).....	2,104,488	43.0

\*As at the Census of 1951.

Births and deaths for the year 1953 are classified by place of residence, marriages being classified by place of occurrence.

Tables 5, 6, 10, 17, 18, 22, 23 and 26 have totals by place of occurrence and place of residence.

### Natural Increase

The natural increase in the population and the computed rates for the period 1925 to 1953 are shown in Table C.

**TABLE C—NATURAL INCREASE AND NATURAL INCREASE RATES, ONTARIO, 1925-1953**

Year	Live Births	Deaths	Excess of Births over Deaths	Natural Increase Rate per 1,000 Population
1925.....	70,122	33,960	36,162	11.6
1926.....	67,617	35,909	31,708	10.0
1927.....	67,671	34,775	32,896	10.2
1928.....	68,510	37,128	31,382	9.5
1929.....	68,458	38,123	30,335	9.1
1930.....	71,263	37,313	33,950	10.0
1931.....	69,209	35,705	33,504	9.7
1932.....	66,842	36,469	30,373	8.7
1933.....	63,646	35,301	28,345	8.1
1934.....	62,234	35,119	27,115	7.7
1935.....	63,069	36,317	26,752	7.5
1936.....	62,451	37,571	24,880	6.9
1937.....	61,645	38,475	23,170	6.3
1938.....	65,564	36,890	28,674	7.8
1939.....	64,123	37,530	26,593	7.1
1940.....	68,524	38,503	30,021	8.0
1941.....	72,262	39,226	33,036	8.7
1942.....	78,192	39,119	39,073	10.1
1943.....	81,173	41,063	40,110	10.2
1944.....	78,090	39,781	38,309	9.7
1945.....	78,974	39,499	39,475	9.8
1946.....	97,446	39,758	57,688	14.1
1947.....	108,853	41,619	67,234	16.1
1948.....	104,195	42,364	61,831	14.5
1949.....	106,601	43,379	63,222	14.4
1950.....	108,708	43,948	64,760	14.5
1951.....	114,827	43,981	70,846	15.4
1952.....	123,891	44,402	79,489	16.5
1953.....	129,771	45,242	84,529	17.3

A slight decrease in the rate was evident in 1944 and 1945, a definite increase for the years 1946 to 1953 with the year 1953 showing the highest rate ever obtained.

**TABLE D—SUMMARY OF VITAL STATISTICS BY MONTHS, FOR RESIDENTS IN THE PROVINCE OF ONTARIO, 1953**

<b>Total.....</b>	<b>129,771</b>	<b>45,954</b>	<b>45,242</b>	<b>3,696</b>

### Births

Table E presents an historical summary of births, stillbirths and illegitimate births, together with computed rates for each, while Chart 1 portrays the general trends over the same period.

TABLE E—SUMMARY OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE LIVE BIRTHS, AND RATES, ONTARIO, 1925-1953

Year	LIVE BIRTHS		STILLBIRTHS		ILLEGITIMATE LIVE BIRTHS	
	Number	Rate per 1,000 Population	Number	Rate per 1,000 Live Births	Number	Rate per 1,000 Live Births
1925.....	70,122	22.5	2,782	39.7	1,881	26.8
1926.....	67,617	21.4	2,812	41.5	1,823	26.9
1927.....	67,671	21.0	2,758	40.7	1,958	28.9
1928.....	68,510	20.9	2,793	40.7	2,170	31.7
1929.....	68,458	20.5	2,730	39.9	2,376	34.7
1930.....	71,263	21.0	2,713	38.1	2,651	37.2
1931.....	69,209	20.2	2,652	38.3	2,773	40.1

1937.....	61,645	16.9	1,988	32.2	2,796	45.3
1938.....	65,564	17.9	2,015	30.7	3,061	46.7
1939.....	64,123	17.3	1,965	30.6	2,884	44.9
1940.....	68,524	18.3	2,037	29.7	3,167	46.2
1941.....	72,262	19.1	2,084	28.8	3,384	46.8
1942.....	78,192	20.1	2,088	26.7	3,789	48.5
1943.....	81,173	20.7	2,060	25.3	3,741	46.1
1944.....	78,090	19.7	1,866	23.9	3,764	48.2
1945.....	78,974	19.7	1,844	23.3	4,075	51.5
1946.....	97,446	23.8	2,016	20.7	4,165	42.7
1947.....	108,853	26.1	2,176	19.9	4,748	43.6
1948.....	104,195	24.4	1,972	18.9	4,795	46.0
1949.....	106,601	24.3	2,002	18.8	3,802	35.7
1950.....	108,708	24.3	1,932	17.8	3,772	34.7
1951.....	114,827	25.0	1,975	17.2	3,807	33.2
1952.....	123,891	26.0	2,085	16.8	3,920	31.6
1953.....	129,771	26.5	1,952	15.0	4,080	31.4

There was a definite increase in live births in 1947 when the rate was 26 decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951, 1952 and 1953.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1953 for every 1,000 babies born alive, 15 were stillborn.

With respect to illegitimacy, Table H and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1953, 75 were to this group of mothers.

Tables F, G and H provide a breakdown of births by age of mothers for the same three groups, and indicate to some degree the extent to which age has contributed to the trends outlined above, while Chart 2 provides an interesting picture of the age distribution over the same period on the basis of five-year averages.

Chart 2

# PERCENTAGE OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS IN EACH AGE GROUP OF MOTHERS

ONTARIO  
FIVE-YEAR AVERAGES 1936-1950  
AND FOR THE YEAR 1953

## LIVE BIRTHS

## STILLBIRTHS

## ILLEGITIMATE BIRTHS

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario is being published in this Report.

The data included in the following three tables comprises the total number of stillbirths (1,938) registered to resident mothers of this Province. This figure is somewhat less than the 1,952 stillbirths shown in Tables E and G in Part I and in Table I in Part II. The difference is due to the fact that all transcripts of stillbirths to resident mothers outside the Province were not available for tabulation.

Of the 1,938 stillbirths registered during the year, 987 deaths or 50.9 per cent occurred at or near term, while 951 deaths or 49.1 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

Chart 3

INFANT MORTALITY  
ONTARIO  
DEATHS AT EACH AGE PERIOD  
FIVE-YEAR AVERAGES 1936-1950  
AND FOR THE YEAR 1953

### Infant Mortality

Table J and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period. The neonatal rate for 1952 was 20.7 per 1,000 live births as compared with 19.1 in 1953.

### Sixth Revision of the International Lists of Diseases and Causes of death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1950 being 552, 584 in 1951, 529 in 1952, 569 in 1953, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1953 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" show a considerable increase.

TABLE K (1)—DEATHS OF CHILDREN UNDER ONE YEAR (STATED CAUSES OF DEATH), ONTARIO, 1950, 1951, 1952 and 1953

Int. List No. (6th Revision 1950)	Causes of Death	Total Deaths			
		1950	1951	1952	1953

(1) Excluding Patricia Portion.

## Maternal Mortality

From Table M, it will be noted that a considerable reduction in the number of deaths of mothers during childbirth has taken place during the past 20 years with the 1953 rate being considerably below the average of the last decade. In general, the reduction in the rate seems to be apparent in all age groups.

### General Mortality

Table O presents an historical summary of deaths by sex in the province and the computed crude death rates over a 29-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

**TABLE O—DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1925-1953**

Year	DEATHS			RATE PER 1,000 POPULATION

1953.....	45,242	25,347	19,895	9.2	10.3	8.2

Table P presents both male and female crude death rates for each 5-year age-group, based on the population as enumerated at the censuses of 1941 and 1951 and as estimated for the years 1946 to 1950 and for the years 1952 and 1953. There are several features with respect to changing death rates which are worthy of comment, notable among which is the remarkable decrease in the death rate of children under 5 years of age from 12.9 in 1946 to 8.5 in 1953 for males and from 10.0 in 1946 to 6.7 in 1953 for females. Similar declines are apparent in other age-groups.

This latter fact is clearly portrayed in Chart 4 which depicts the percentage of deaths occurring in each age-group of the population.

### Causes of Death

The deaths shown on Table Q (1) are for selected causes or groups of causes to which, during the past 10-year period, more than 75 per cent of total deaths have been recorded. A large part of the increase in certain diseases for the years 1950, 1951, 1952 and 1953 is due to the new selection procedure as outlined by the Sixth Revision of the International Lists of Diseases and Causes of Death.

Chart 4

Rates per 100,000 population

### Mortality from Tuberculosis

Table T (1) shows the deaths from all forms of tuberculosis in the province from 1944 to 1953. Table T (2) shows the death rates per 100,000 population classified by the age of the decedents from 1947 to 1953. During the year 1953 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 6.4 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table T (3) in Part 1 of this report gives details of deaths and death rates for counties according to place of occurrence and place of residence for the year 1953.

## Mortality from Cancer

Chart 5 illustrates the steady upward trend in the mortality rate from cancer. The increase in the total number of deaths since 1944 is shown in Table U (1) and is apparent in most of the age-groups particularly among older persons. Table U (2) shows the rate from 1944 to 1953 by sex.

TABLE U (1)—DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1944-1953

NOTE: Total deaths for cancer for the years 1944-1953 include Hodgkin's disease and the leukaemias.

### Mortality from Pneumonia, Bronchitis and Influenza

In Chart 5 is a curve showing the trend in the death rate from pneumonia.

Table W shows the number of deaths from influenza, bronchitis and pneumonia and indicates the fluctuation in the number of deaths recorded as due to influenza.

**TABLE W—DEATHS FROM PNEUMONIA, BRONCHITIS AND INFLUENZA  
IN ONTARIO, 1943-1953**

CAUSE	1943	1944	1945	1946	1947	1948	1949	1950	1951	1952	1953

### Marriages

From Table X it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1953.

**TABLE X—MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION,  
ONTARIO, 1933-1953**

Year	Number	Rate per 1,000 Population	Year	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1943.....	36,109	9.2
1934.....	25,874	7.3	1944.....	31,227	7.9

1942.....	45,466	11.7	1952.....	45,251	9.5
			1953.....	45,954	9.4

### Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past four censuses.

	1921*	1931	1941	1951
Divorced persons—Male.....	1,135	1,071	2,291	4,766
Female.....	1,369	1,015	2,865	7,668
Per cent of population—Male.....	0.08	0.06	0.12	0.20
Female.....	0.09	0.06	0.15	0.33

\*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table Y. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

TABLE Y—DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1953, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1953

Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females

THE HONOURABLE GEORGE H. DUNBAR  
(Ottawa South)

REGISTRAR-GENERAL

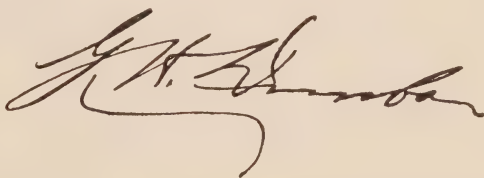

## *Foreword*

I take pleasure in presenting the 85th Annual Vital Statistics Report compiled by the Office of the Registrar-General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1954. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1954.

In conclusion, may I state that while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths of the Province of Ontario.

A handwritten signature in dark ink, appearing to read 'J. H. [unclear]', with a long, sweeping underline.

*Registrar-General.*

SIR:

I have the honour to submit for your approval the Eighty-fifth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1954.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,  
*Deputy Registrar-General.*

TO THE HON. G. H. DUNBAR,  
*Registrar-General of Ontario.*

## PART I. COMPARATIVE AND ANALYTICAL SUMMARY

## Population

For reference purposes the estimated population of the province over a period of about three decades is shown by sex in Table A, while a distribution by sex and age-groups of the estimated population of 1954 is provided in Table B.

TABLE A POPULATION, CENSUSES 1921, 1931, 1941 AND 1951 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX, ONTARIO

Year	Total	Male	Female	Year	Total	Male	Female
1921	2,933,662	1,481,890	1,451,772	1938	3,672,000	1,867,900	1,804,000
1922	2,980,000	1,501,300	1,478,700	1939	3,708,000	1,884,500	1,823,500
1923	3,013,000	1,512,600	1,500,400	1940	3,747,000	1,902,700	1,844,300
1924	3,059,000	1,531,900	1,527,100	1941	3,787,655	1,921,201	1,866,454
1925	3,111,000	1,533,000	1,558,000	1942	3,884,000	1,966,400	1,917,600
1926	3,164,300	1,576,100	1,588,200	1943	3,915,000	1,981,600	1,933,400
1927	3,219,000	1,611,900	1,607,100	1944	3,963,000	2,004,600	1,958,400
1928	3,278,000	1,651,500	1,626,500	1945	4,000,000	2,014,600	1,985,400
1929	3,334,000	1,685,500	1,648,500	1946	4,093,000	2,064,300	2,028,700
1930	3,386,000	1,718,700	1,667,300	1947	4,176,000	2,106,400	2,069,600
1931	3,431,683	1,748,844	1,682,839	1948	4,275,000	2,158,900	2,116,100
1932	3,473,000	1,768,300	1,704,700	1949	4,378,000	2,210,500	2,167,500
1933	3,512,000	1,788,300	1,723,700	1950	4,471,000	2,249,700	2,221,300
1934	3,544,000	1,804,400	1,739,600	1951	4,597,542	2,314,170	2,283,372
1935	3,575,000	1,820,500	1,754,500	1952	4,766,000	2,406,400	2,359,600
1936	3,605,500	1,840,000	1,765,500	1953	4,897,000	2,471,900	2,425,100
1937	3,637,000	1,851,200	1,785,800	1954	5,046,000	2,547,000	2,499,000

The estimated populations for 1922 to 1930, 1932 to 1940 and 1942 to 1950 have been revised and the necessary adjustments have been made in the tables showing rates.

TABLE B ESTIMATED POPULATION OF ONTARIO, BY SEX AND AGE-GROUP, 1954

AGE GROUP	Total	Male	Female	AGE GROUP	Total	Male	Female
Under 5.....	590,700	302,500	288,200	50-54.....	260,900	133,500	127,400

40-44.....	336,800	171,900	164,900	<b>75-89.....</b>	<b>137,200</b>	<b>61,300</b>	<b>75,900</b>
<b>30-44.....</b>	<b>1,094,500</b>	<b>550,700</b>	<b>543,800</b>	90 and over	5,500	2,000	3,500
45-49.....	294,700	152,300	142,400	<b>Total.....</b>	<b>5,046,000</b>	<b>2,547,000</b>	<b>2,499,000</b>

Figures supplied by Social Analysis Branch, Dominion Bureau of Statistics.

\*These estimates do not take into account interprovincial migration, figures for which are not available for intercensal years.

The rural and urban distribution of the 1954 population was as follows:—

Population Group	Assessed Population	Per cent
Incorporated centres *10,000 population and over.....	2,237,402	44.3
Incorporated centres *5,000 to 10,000 population.....	265,923	5.3
Incorporated centres *1,000 to 5,000 population.....	367,934	7.3
Rural population (including incorporated centres under *1,000).....	2,174,741	43.1

\*As at the Census of 1951.

### Natural Increase

The natural increase in the population and the computed rates for the period 1925 to 1954 are shown in Table C.

**TABLE C NATURAL INCREASE AND NATURAL INCREASE RATES,  
ONTARIO, 1925-1954**

Year	Live Births	Deaths	Excess of Births over Deaths	Natural Increase Rate per 1,000 Population
1925.....	70,122	33,960	36,162	11.6
1926.....	67,617	35,909	31,708	10.0
1927.....	67,671	34,775	32,896	10.2
1928.....	68,510	37,128	31,382	9.5

\* Born to unmarried Mothers

There was a definite increase in live births in 1947 when the rate was 26 decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951, 1952, 1953 and 1954.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1954 for every 1,000 babies born alive, 15 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1954, 77 were to this group of mothers.

AND FOR THE YEAR 1954

## Stillbirths

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario was published in this Report.

The data included in the following three tables comprises the total number of stillbirths (2,027) registered to resident mothers of this Province.

Of the 2,027 stillbirths registered during the year, 1,123 deaths or 55.4 per cent occurred at or near term, while 875 deaths or 43.2 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

Chart 3

# INFANT MORTALITY ONTARIO DEATHS AT EACH AGE PERIOD FIVE-YEAR AVERAGES 1936-1950 AND FOR THE YEAR 1954

Infant Mortality

Table J and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International Lists of Diseases and Causes of death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1950 being 552, 584 in 1951, 529 in 1952, 569 in 1953, 571 in 1954, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1954 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

### Maternal Mortality

From Table M, it will be noted that a considerable reduction in the number of deaths of mothers during childbirth has taken place during the past 20 years with the 1954 rate being considerably below the average of the last decade. In general, the reduction in the rate seems to be apparent in all age groups.

## General Mortality

Table O presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

**TABLE O DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1925-1954**

Year	DEATHS			RATE PER 1,000 POPULATION

1954.....	44,515	25,050	19,465	8.8	9.8	7.8

Table P presents both male and female crude death rates for each 5-year age-group, based on the population as enumerated at the censuses of 1951 and as estimated for the years 1947 to 1950 and for the years 1952, 1953 and 1954. There are several features with respect to changing death rates which are worthy of comment, notable among which is the remarkable decrease in the death rate of children under 5 years of age from 12.5 in 1947 to 7.7 in 1954 for males and from 9.9 in 1947 to 6.0 in 1954 for females. Similar declines are apparent in other age-groups.

This latter fact is clearly portrayed in Chart 4 which depicts the percentage of deaths occurring in each age-group of the population.

### Causes of Death

The deaths shown on Table Q (1) are for selected causes or groups of causes to which, during the past 10-year period, more than 75 per cent of total deaths have been recorded. A large part of the increase in certain diseases for the years 1950-1954 is due to the new selection procedure as outlined by the Sixth Revision of the International Lists of Diseases and Causes of Death.

(1) Rate per 100,000 female population.

Chart 5

DEATHS FROM  
TUBERCULOSIS, CANCER AND PNEUMONIA

ONTARIO, 1947-54

Rates per 100,000 population

### Mortality from Tuberculosis

Table T (1) shows the deaths from all forms of tuberculosis in the province from 1945 to 1954. Table T (2) shows the death rates per 100,000 population classified by the age of the decedents from 1945 to 1954. During the year 1954 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 6.1 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table T (3) in Part 1 of this report gives details of deaths and death rates for counties according to place of occurrence and place of residence for the year 1954.

## Mortality from Cancer

Chart 5 illustrates the steady upward trend in the mortality rate from cancer. The increase in the total number of deaths since 1945 is shown in Table U (1) and is apparent in most of the age groups particularly among older persons. Table U (2) shows the rate from 1945 to 1954 by sex.

NOTE: Total deaths for cancer for the years 1945-1954 include Hodgkin's disease and the leukaemias.

### Mortality from Pneumonia, Bronchitis and Influenza

In Chart 5 is a curve showing the trend in the death rate from pneumonia.

Table W shows the number of deaths from influenza, bronchitis and pneumonia and indicates the fluctuation in the number of deaths recorded as due to influenza.

**TABLE W DEATHS FROM PNEUMONIA, BRONCHITIS AND INFLUENZA, ONTARIO, 1944-1954**

CAUSE	1944	1945	1946	1947	1948	1949	1950	1951	1952	1953	1954

### Marriages

From Table X it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1954.

**TABLE X MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1933-1954**

Year	Number	Rate per 1,000 Population	Year	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1944.....	31,227	7.9
1934.....	25,874	7.3	1945.....	34,137	8.5

1943.....	36,109	9.2	1954.....	45,028	8.9

### Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past four censuses.

	1921*	1931	1941	1951
Divorced persons—Male.....	1,135	1,071	2,291	4,766
Female.....	1,369	1,015	2,865	7,668
Per cent of population—Male.....	0.08	0.06	0.12	0.20
Female.....	0.09	0.06	0.15	0.33

\*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table Y. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

**TABLE Y DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1954, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1954**

Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females
